L14: Entry 13 of 13

File: USPT

Oct 7, 1997

DOCUMENT-IDENTIFIER: US 5675733 A

TITLE: Statistical analysis and display of reception status of electronic messages

Detailed Description Text (6):

The message which proceeds to one or more addressees or addressee nodes continues to contain the user ID and the file. The UDI may be transmitted as well if mail service 70 is present in the network. As is common with most transmission systems, and digital transmission systems in particular, numerous arrangements for monitoring the progress of the transmission are provided such as by answer-back types of acknowledgement for correct or corrupted transmission. If a corrupted transmission is detected, packets of the digital transmission can be repeated at the sender under control of the answer-back signal. Answer-back signals are also sent for correct reception of data to insure transmission system integrity. It is therefore contemplated that the invention will be responsive to at least some of these acknowledgements in the same manner as confirmation of delivery (COD) acknowledgements which are automatically sent as e-mail messages when an addressee accesses the e-mail message sent. Therefore, it will be sufficient for an understanding of the invention to describe the operation of the invention in response to COD messages.
